

Semir Mahovkic

SENIOR SOFTWARE ENGINEER

PROFILE

Over 11 years of experience in software development, I specialize in Golang and cloud-native technologies. My expertise covers soft real-time systems, asynchronous communications, and distributed applications for some really cool and big projects (Cisco's Cloud Native Firewall, Sportradar's data sync/streaming platform, Agilent's laboratory custom analysis, TVM's low latency trading platform — submillisecond), utilizing tools like RabbitMQ, MQTT, SQS/SNS, PubSub, gRPC, Aeron and WebSockets.

Additionally, I have experience setting up, configuring and implementing Keycloak IAM on Kubernetes environments, integrating it with Grafana, ArgoCD and backend services (Golang and .NET) to enable smooth authentication and access control.

I can take full ownership of an application's lifecycle — from coding and building to deploying and monitoring.

TECHNICAL SKILLS

Golang	RabbitMQ, MQTT, SQS, SNS, gRPC + streams, WebSockets, Kubernetes Operators, Gin, Gorm, Jaeger, Docker, GraphQL, Temporal, FX, Wire, Aeron, FIX, Claude Code
PHP	Laravel, Websockets, Redis, MySQL, SQS/SNS, Postgres, RabbitMQ, Inertia, Notifications, Reverb, Social Logins, PDF generating, Claude Code
C#	.NET Core, IdentityServer4, HangFire, Jaeger, WebSockets, Automapper, Docker
Kubernetes	Operators/CRDs, Helm charts, ArgoCD (app-of-apps), Prometheus, Loki, RabbitMQ, Jaeger, Elasticsearch, Grafana, OpenTelemetry Collector, SealedSecrets

WORK EXPERIENCE

11/2025 –
Present

Evoila — Mainz, Germany

Website evoila.com

Project [VCF Aria Automation](#) (Broadcom/VMware)

Technologies Typescript, VMware Cloud Automation, Claude Code

Responsibilities

- Implement custom forms in Aria Automation for catalog items so customers can automate deployment of VMs for their private Cloud infrastructure.
- Implementing custom solutions (plugins) for automating infrastructure configurations and management in Aria Automation (custom workflows, actions).
- Improve existing libraries for better reusability and type safety, taking advantage of the TypeScript type system.

04/2026 –
07/2026

BytOps — Lukavac, Bosnia and Herzegovina

Website bytops.xyz

Project Fakturko

Technologies PHP, Typescript, Vue, Laravel, Notifications, Inertia, Postgres, Claude Code

Personal project to manage and track invoices. Developer friendly, templated invoices.

04/2026 –
07/2026

ByteBuds — Sarajevo, Bosnia and Herzegovina

Website bytebuds.io

Project [TVM](#) (TradeView Markets)

Technologies Golang, Typescript, React, Aeron, Postgres, FIX, Claude Code

Responsibilities

- Developed low latency backend system for online trading platform with zero allocs in hot path.
- Implemented client facing interfaces for order placement and tracking on the platform.
- Used Aeron protocol to implement low latency communication between services.
- Integrated with multiple LPs (liquidity providers), end to end order executions.
- Setup of Github actions for automated deployments.

07/2024 –
11/2025

Evoila — Mainz, Germany

Website	evoila.com
Project	MFC (MultiFeedCenter)
Technologies	dotnet, Kubernetes, Helm charts, ArgoCD, GCP, RabbitMQ, MongoDB, MySQL, Postgres, Claude Code

Responsibilities

- Building and managing Kubernetes environments, using Helm charts to define, package, and deploy microservices efficiently.
- Implementing GitOps CD with ArgoCD, using the app-of-apps pattern to automate and streamline Kubernetes application deployments.
- Developed and integrated an observability stack on Kubernetes, setting up Grafana, Loki, Prometheus, Elasticsearch, and OpenTelemetry Collector to enable monitoring, logging, and distributed tracing across services.
- Configured and integrated Keycloak IAM, enabling seamless login for Grafana, ArgoCD, and backend services (Golang and .NET).
- Developing asynchronous services to synchronize data from multiple data feed providers, improving data accuracy and reducing latency.

08/2023 –
07/2024

Endava — London, UK

Website	endava.com
Project	Sportradar
Technologies	Golang, gRPC, Kubernetes, Redis

Responsibilities

- Implemented real-time data synchronization services for Sportradar, a leading sports streaming platform, leveraging Golang, gRPC and Kubernetes to ensure low-latency of data distribution.

08/2022 –
07/2023

Endava — London, UK

Website endava.com

Project CSFN (Cisco Secure Firewall Cloud Native)

Technologies Golang, Kubernetes, Helm charts, ArgoCD, AWS, gRPC, Postgres, Redis

Responsibilities

- Led a team in developing Kubernetes Operators for Cisco's Firewall and VPN, automating deployments, security configurations, and resource management.
- Designed and implemented a Kubernetes Operator that integrates AWS Shield with newly deployed Kubernetes services, enhancing service security.
- Implemented resource access control by refining Kubernetes RBAC and integrating AWS IAM, enhancing security across cloud environments.

11/2021 –
07/2022

Endava — London, UK

Website endava.com

Project Agilent

Technologies dotnet, Typescript, Angular, Microservices, Embedded software

Custom software for Agilent's laboratory instruments, used for chemical analysis and research — from fuel and oil quality testing to cancer research.

Responsibilities

- Developed .NET microservices running on the instruments themselves, custom hardware built on Windows Embedded.
- Built Angular interfaces for configuring analysis runs and reading back results.

06/2019 –
11/2021

Mistral — Sarajevo, Bosnia and Herzegovina

Website mistral.ba

Project [MTVO](#)

Technologies dotnet, Typescript, Angular, AWS, Websockets, Redis, MSSQL

Masters of Void Organization.

Responsibilities

- Developed real-time data synchronization services for a virtual goods trading platform, enabling smooth, cross-browser synchronization.
- Assisted frontend team with building client facing features with Angular to speed up the development.
- Setup testing environment for continuous integration and deployment pipelines, ensuring high-quality code.

03/2018 –
05/2019

MOP — Sarajevo, Bosnia and Herzegovina

Website mop.ba

Project [NAGA](#)

Technologies Golang, Kubernetes, RabbitMQ, Websockets, AWS, Redis, Postgres, gRPC

Online cryptoexchange platform.

Responsibilities

- Developed real-time backend services for a cryptocurrency exchange, providing instant price updates across web and mobile platforms.
 - Utilized Kubernetes for managing and orchestrating scalable services, ensuring high availability and reliability in a cloud-native environment.
 - Integrated RabbitMQ for event-driven messaging and Websockets/MQTT for real-time communication.
-

05/2015 –
08/2017

Imel d.o.o. — Lukavac, Bosnia and Herzegovina

Website	imel.ba
Project	Android + backend
Technologies	PHP, Laravel, AngularJS, Linux, Websockets, Android, MySQL, SQLite

Responsibilities

- Developed backend services for a dental monitoring application, enhancing service efficiency.
- Built a location-based e-commerce platform for heavy truck and machinery rentals, optimizing the user experience for real-time transactions.
- Used AngularJS for client facing frontends.
- Led the development of Android applications for restaurants and commercialists to manage orders and track status in real-time, improving workflow and reducing errors.
